Release Notes: Version 1.0.185.0

Date: 22 June 2011.

Issue:	**License Validation Relaxed for trial/Evaluation.**
Tracking url:	Internal (email)
Comment:	With the previous licensing model it was impossible to install commercial edition on Developer machines (where Microsoft BizTalk Developer Edition is running). This created challenges for customers who want to evaluate the product. With this release that rule is relaxed. If trial key is used, the application will work until the expiry date.

Issue:	**BAM Portal error when the activity column doesn't have an alias.**
Tracking url:	http://getsatisfaction.com/biztalk360/topics/bam_portal_on_views_excbyapplication_en_excall_throws_an_error
Comment:	The WCF data structure was defined with columnAlias property REQUIRED. It just proved, it's an optional item and in some cases columnAlias will not be present. This is issue in now fixed.
