

# Release Notes: Version 5.0.330

Date: 28<sup>th</sup> November 2012.

## Service pack release after main 5.0.284 release

Functionality:	<b>Installer Improvement.</b>
Tracking url:	Internal email
Comment:	The installer now supports BizTalk Server 2013 BETA. More pre-validation logic is added. So the user can verify whether everything is OK before clicking the upgrade button. A bug related to upgrade in non-default drive is fixed. A bug related to partial upgrade is fixed. Example: Database components were not installed previously.

Bug:	<b>Graphical Message Flow Viewer.</b>
Tracking url:	Internal testing
Comment:	Graphical message flow was throwing exceptions in situations where the send port retried multiple times. Now this is fixed

Bug:	<b>Active Directory Custom Path.</b>
Tracking url:	Internal testing
Comment:	In some customer scenario a custom AD path is been used instead of standard ones. In this case, when you try to add a user and a new policy, you get an exception. This is now been fixed; you can define your custom path in the database.

Bug:	<b>Tracking Query result date time formatting.</b>
Tracking url:	Customer Email
Comment:	Date Time column in Tracking data query was not displaying in the correct globalization format. It's been fixed now.
