

# Release Notes: Version 6.7.258

Date: 27<sup>th</sup> September 2013

## Bug Fixes

Bug:	<b>Monitoring – Threshold Alert Window wrong logic</b>
Tracking url:	Customer Email
Comment:	We identified a bug, where the threshold window logic was not correct. Ex: Instead of monitoring and raising alerts between 9am to 5pm (for business day), it was doing the reverse i.e monitoring and alerting was disabled for that period.

Bug:	<b>Not able to terminate active instances</b>
Tracking url:	Customer Email
Comment:	You were only able to suspend an active instance, the terminate button was active only for suspended instances. Now you can terminate/suspend active instances.
